

PostGIS 2.0 - Was bringt die neue Version?

Astrid Emde

-  WhereGroup , Bonn
- Projektumsetzung im Bereich WebGIS
- Projekte mit PostgreSQL/PostGIS, MapServer, GeoServer, Quantum GIS, Mapbender, OpenLayers
- Aktiv in OSGeo und FOSSGIS e.V.

Übersicht

- PostGIS – das Projekt
- Stand 2.0
- Was bringt die neue Version?
- Umzug auf die neue Version
- Neuerungen

Workshop

- OSGeo-Live 5.5 um PostGIS 2.0 erweitert /opt/postgis2.0/
- Download Daten und Präsentation
http://trac.osgeo.org/osgeo/wiki/Live_GIS_Workshop_Install

Workshop Agenda

- Vorstellung der Neuerungen
- Übungen
 - 1. Geometrieverwaltung
 - 2. Neue Funktionen
 - 3. Datenbereinigung
 - 4. Raster

Was ist PostGIS?

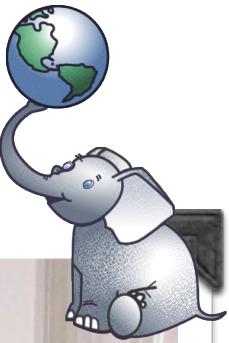

Was ist PostGIS?

- PostGIS ist ein räumlicher Aufsatz zur Speicherung und Verwaltung von Geodaten in PostgreSQL
- Konform mit der OGC Simple Feature Spezifikation für SQL (SFSQL)
- Orientierung an der ISO Spezifikation SQL/MM Teil 3

Es war einmal ...

2001

Dave Blasby

Paul Ramsey

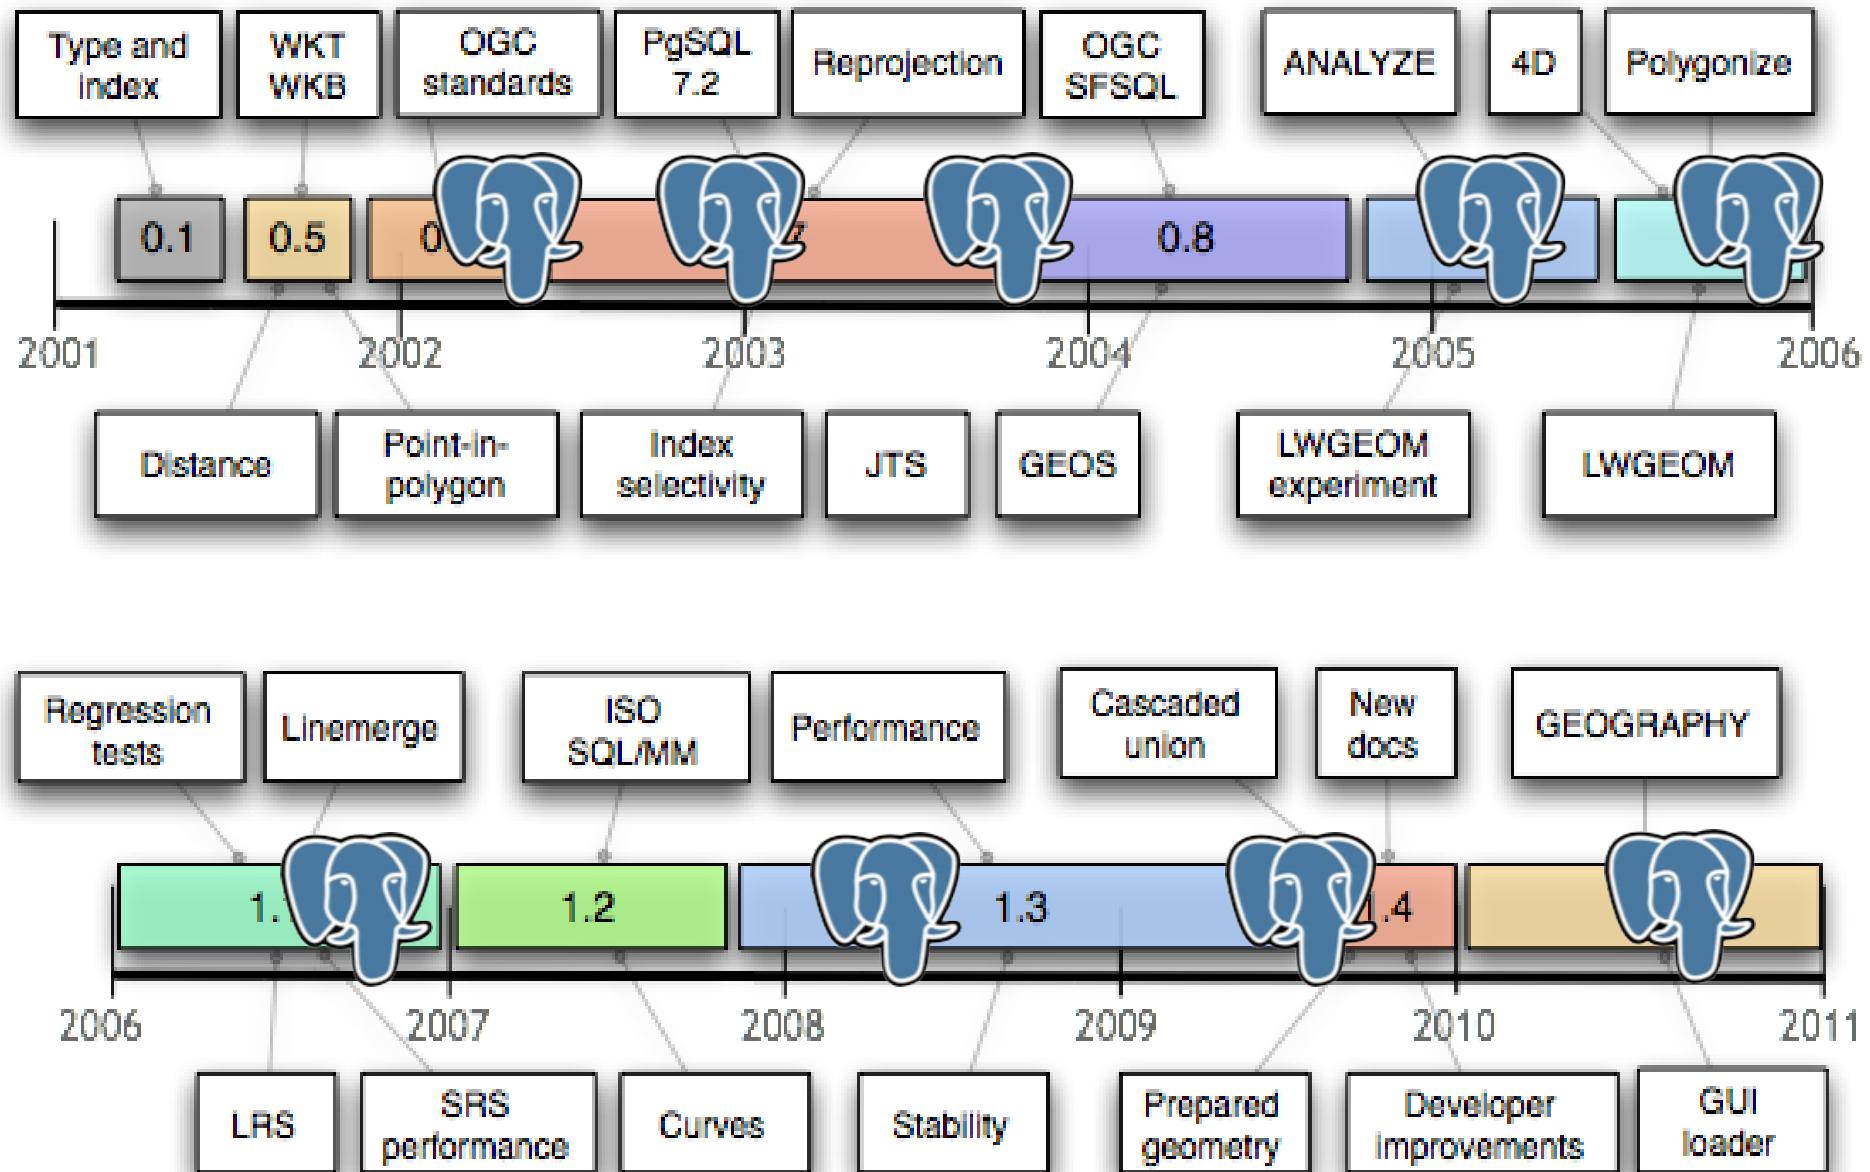

[1]

Wer steckt hinter PostGIS?

Wer steckt hinter PostGIS?

- stabiles und großes Entwicklerteam
- Project Steering Committee, Chair Paul Ramsey
- Vernetzung mit anderen Projekten
- Code Sprints
- Aktive Community
- OSGeo Incubation

Wie ist der Stand von PostGIS 2.0?

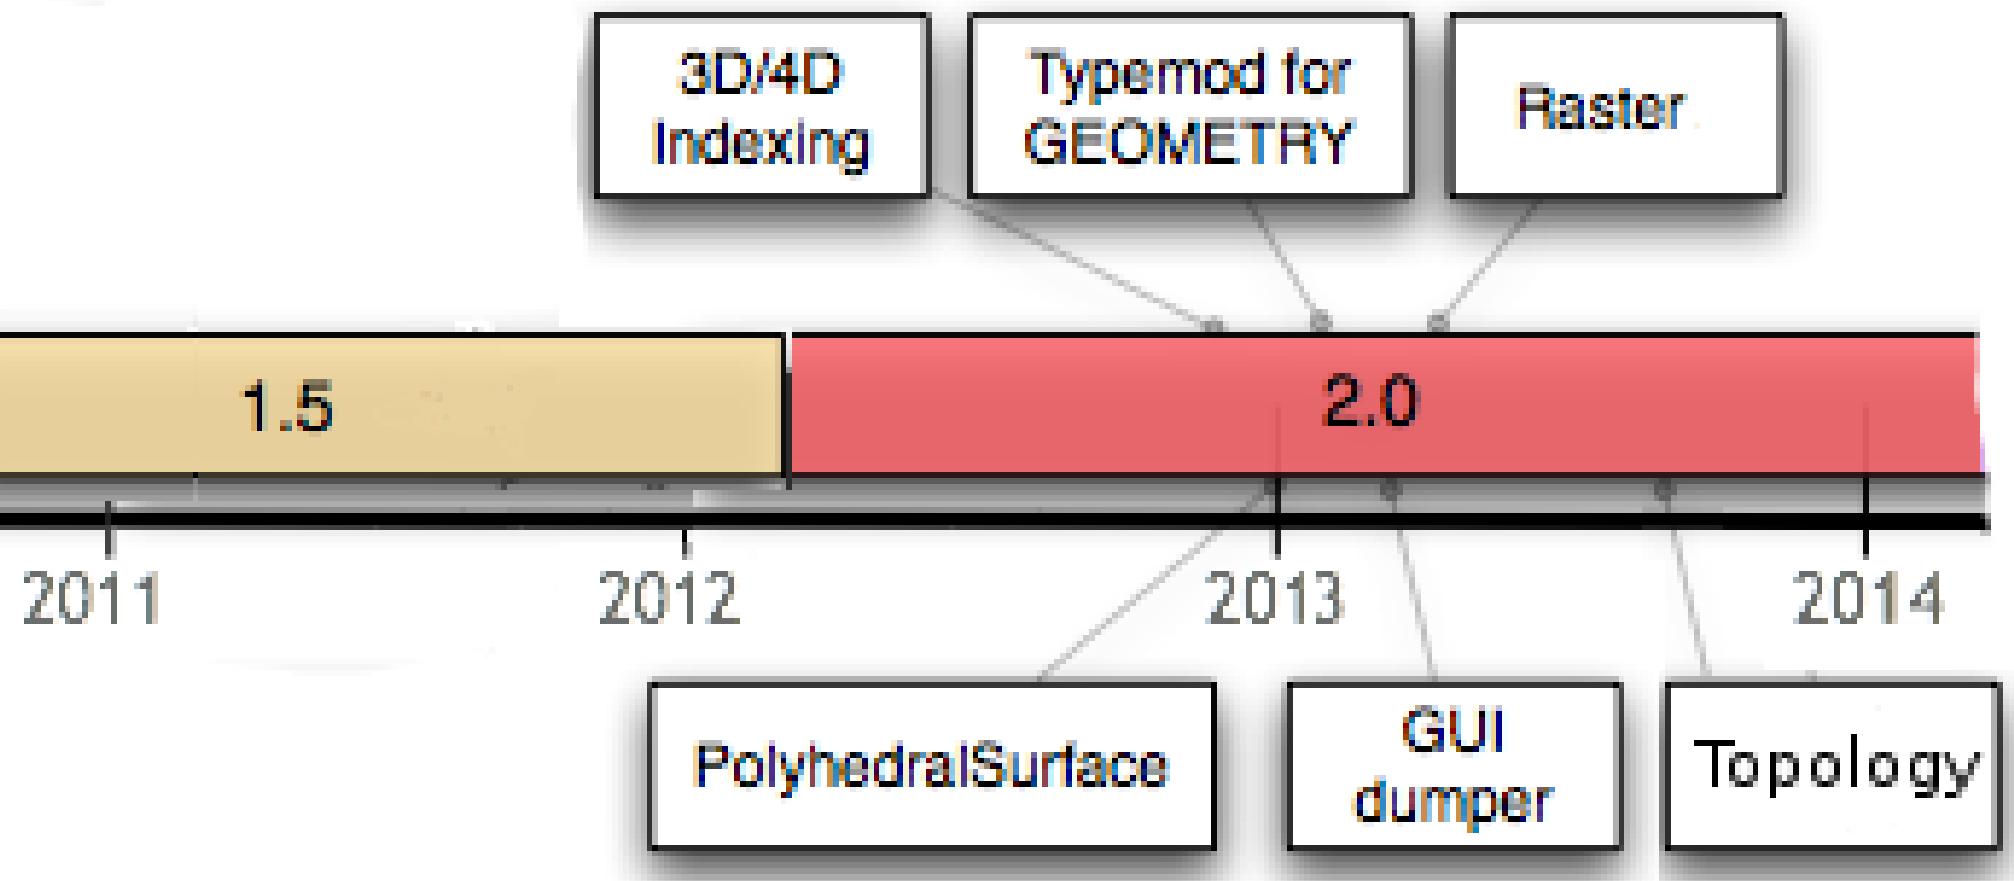

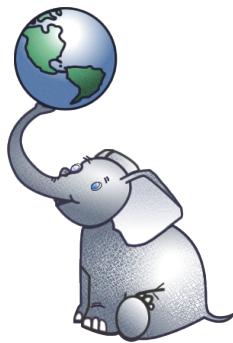

PostGIS 2.0

1. Quartal 2012

Der Plan

- PostGIS 2.0beta3 (15/03/2012)
- Nur noch wenige offene Tickets
 - > 900 Tickets wurden bearbeitet
- Snapshots zum Download
- Unterstützung durch Testen ist sehr willkommen

[1]

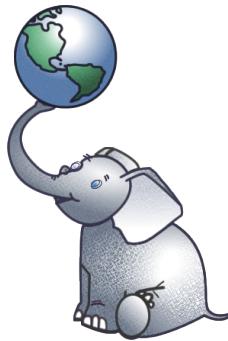

PostGIS 2.0 - Was bringt die neue Version?

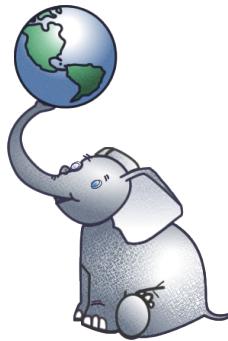

PostGIS 2.0 Neuerungen

- Vereinfachte Verwaltung
- Erweiterte SQL/MM Unterstützung
- Neue Funktionen
- Rasterunterstützung
- Topology
- Erweiterte 3D Unterstützung

Was ist beim Umzug zu beachten?

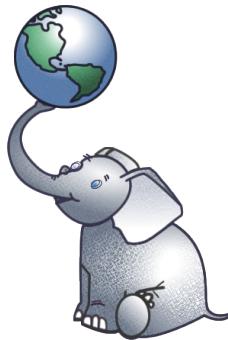

- Hard upgrade ist notwendig
- > 250 Funktionen entfallen

Hard Upgrade

- Dump/Reload
- Bereinigung mit Hilfe von `postgis_restore.pl`
- Perl-Skript entfernt alle PostGIS Definitionen

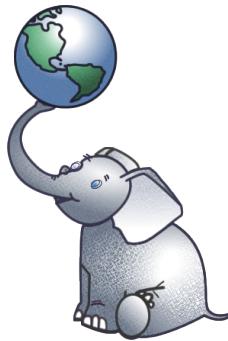

Hard Upgrade

```
pg_dump -h localhost -p 5432 -U postgres  
-Fc -b -v -f "/data/olddb.backup" olddb
```

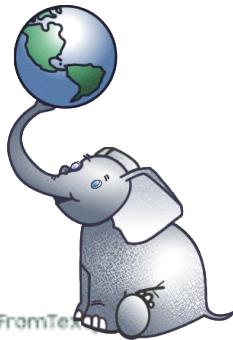

```
createdb -h localhost -p 5432 -U  
postgres -T postgis_template newdb
```

```
perl utils/postgis_restore.pl  
"/data/olddb.backup" | psql -U postgres  
newdb 2> errors.txt
```

Funktionen entfallen

- > 250 Funktionen entfallen
- Oft ein neuer Funktionsname gemäß SQL/MM Standard
- Neuer Name `ST_*`
- Neuer Name `ST_3D*`

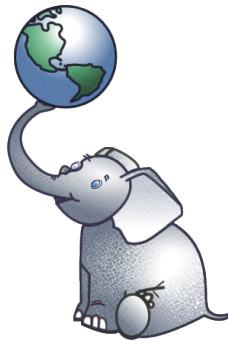

Entfallende Funktionen

The following functions are deprecated in PostGIS 2.0:

```

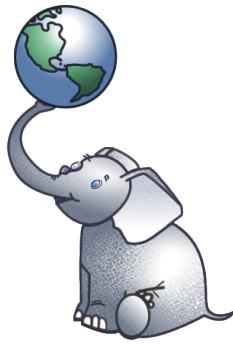

IsEmpty(geometry)          MPointFromText(text,int4) MultiPolyFromWKB(bytea) PointFromText(text,int4)
Force_3dz(geometry)        MLineFromText(text)      npoints(geometry) PointN(geometry,integer) polygonFromText
Force_3d(geometry)         LineFromWKB(bytea)     mem_size(geometry) MultiLineStringFromText(text)  RotateX(geometry,float8,
Force_2d(geometry)         LineMerge(geometry)   MakePolygon(geometry) nrings(geometry) PolyFromWKB(bytea,int) st_box(box3d)
distance(geometry,geometry) Expand(geometry,float8) length2d_spheroid(geometry,spheroid) MPolyFromText(text,int4) PointOnSurface(geometry) st_box3d(geometry)

```

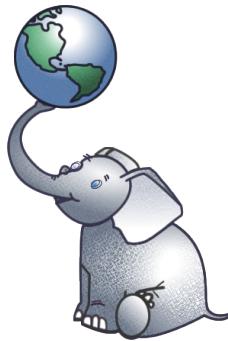

Achtung Anpassungen!

- Views
- Eigene Funktionen, Trigger, Skripte
- DATA-Angabe MapServer Mapdatei
- Anwendungen wie MapServer, GeoServer, QGIS → Umstieg auf die neueste Version

legacy.sql

CREATE EXTENSION

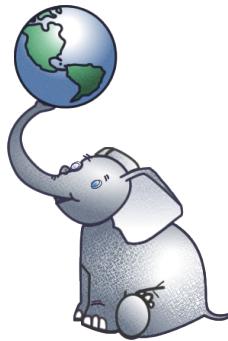

- Installation von PostGIS als Erweiterung
- Ab PostgreSQL 9.1
- Mehr Flexibilität, leichterer Upgrade
- PostGIS nicht mehr im Backup

```
CREATE EXTENSION postgis;
```

Korrektur:
Rastersupport wird über
EXTENSION postgis installiert

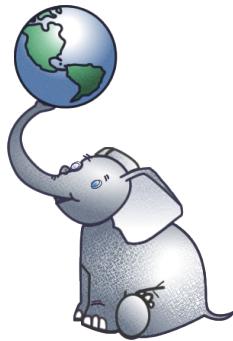

~~CREATE EXTENSION postgis_raster;~~

```
CREATE EXTENSION postgis_topology;
```

Geometrieverwaltung

- Geometriespalten können über Type Modifier erzeugt werden
- `geometry_columns` ist nun ein View, der aus dem Systemkatalog liest

Geometriespalten über typmod

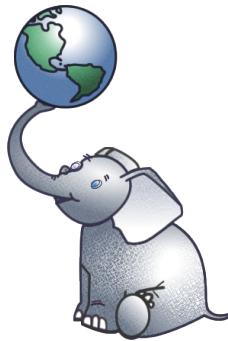

```
CREATE TABLE poi (
    gid serial,
    name varchar
    the_geom geometry(POINT,25832)
);
```

AddGeometryColumn use_typmod

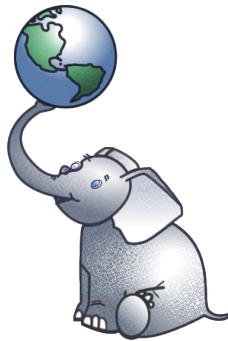

- use_typmod – default true, Erzeugung über Type Modifier
- use_typmod false – legt Geometry über den alten Weg mit Constraints an

```
SELECT AddGeometryColumn
('public',
'poi',
'the_geom',
25832,
'POINT',
2,
true);
```

Registrierung von Views

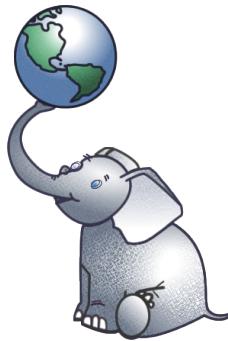

```
CREATE VIEW v_buffer_poi AS
SELECT gid,
       name,
       ST_Buffer(the_geom, 1) ::geometry(Polygon, 25832)
       as the_geom
FROM poi;
```

geometry_columns

```
SELECT f_table_schema,  
f_table_name, f_geometry_column,  
coord_dimension,  
srid, type  
FROM geometry_columns;
```

f_table_schema	f_table_name	f_geometry_column	coord_dimension	srid	type
public	poi	the_geom	2	25832	POINT
public	v_buffer_poi	the_geom	2	25832	POLYGON
public	v_buffer_poi_ohne_typmod	the_geom	2	0	GEOMETRY

Neue Funktionen

- ST_FlipCoordinates
- ST_Split
- ST_Snap
- ST_AsRaster
- Verbesserte SQL/MM Unterstützung

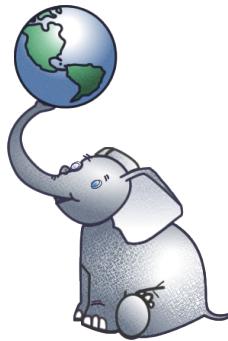

ST_FlipCoordinates

```
SELECT ST_AsText(  
    ST_FlipCoordinates(  
        ST_GeomFromText('POINT(10 50)',4326)  
    )  
) ;
```

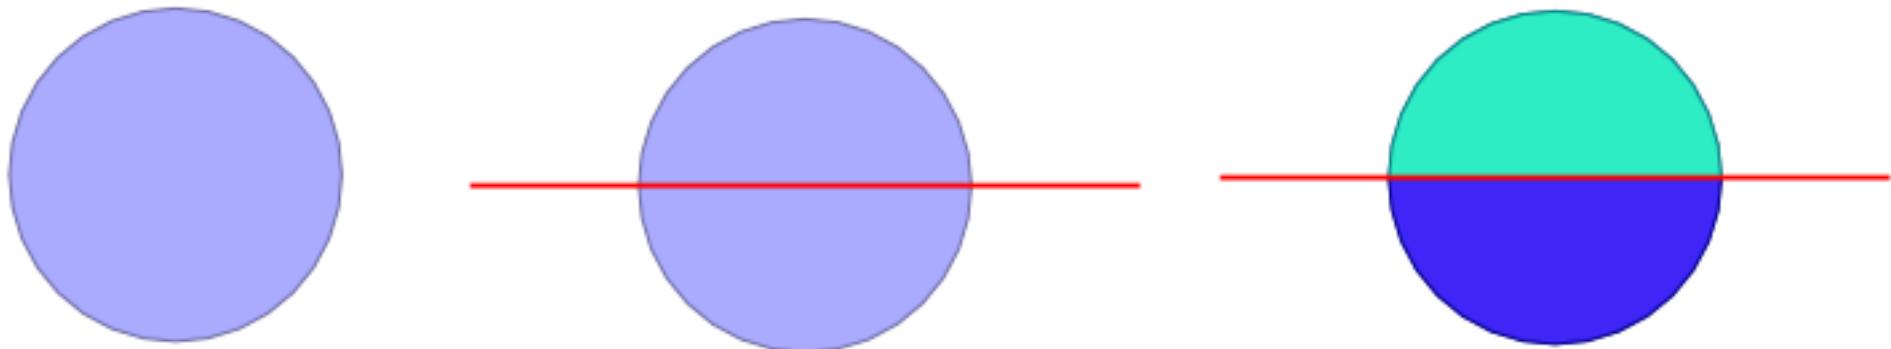

st_astext

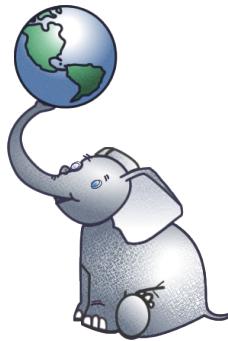

POINT(50 10)

ST_Split

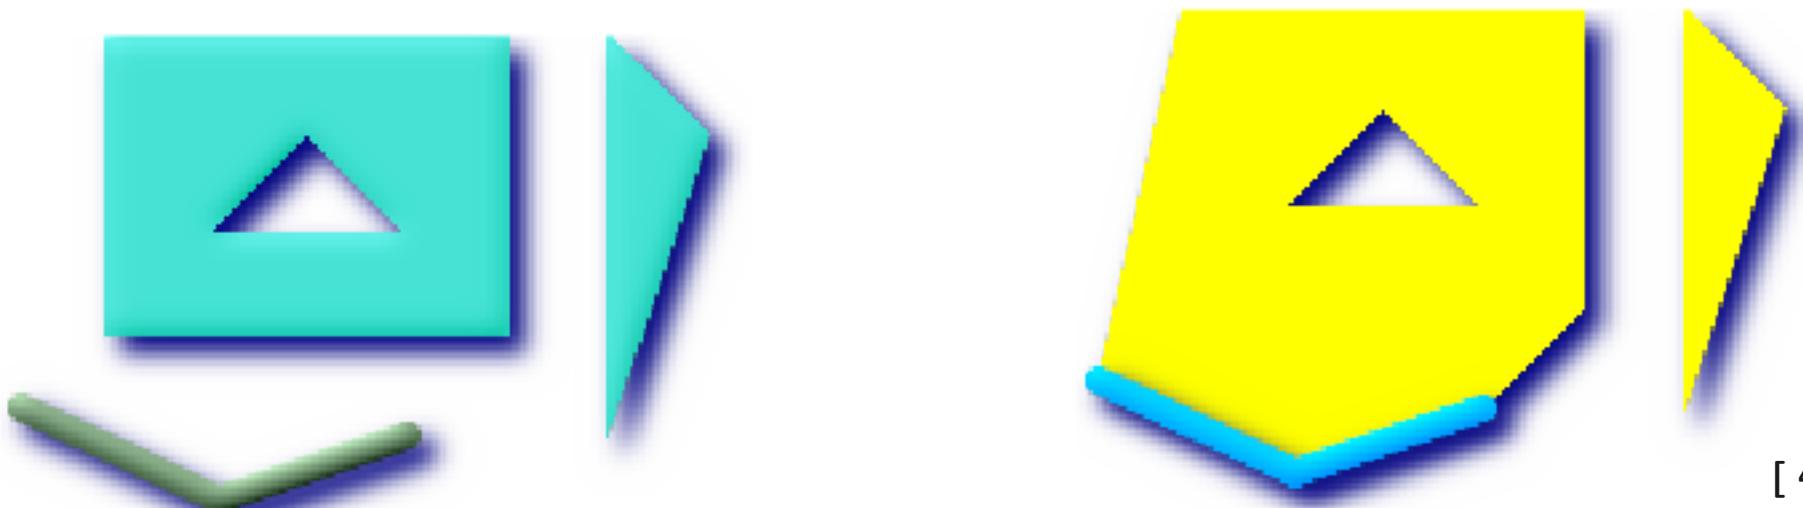

```
SELECT (split).path[1],  
(split).geom::geometry(Polygon,4326) AS  
the_geom FROM (SELECT ST_Dump(ST_Split(  
ST_Buffer(ST_GeomFromText('POINT(10  
50)',4326), 5),  
ST_GeomFromText('LINESTRING(0 50,20  
50)',4326))) AS split) AS foo;
```

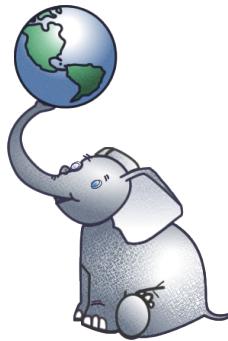

ST_Snap

```
SELECT ST_AsText(ST_Snap(poly,line,
ST_Distance(poly,line)*1.25)) AS polysnapped FROM (SELECT
ST_GeomFromText('MULTIPOLYGON(
((26 125, 26 200, 126 200, 126 125,26 125 ),( 51 150, 101
150, 76 175, 51 150 )),(( 151 100, 151 200, 176 175, 151
100 )))') As poly,ST_GeomFromText('LINESTRING (5 107, 54
84, 101 100)') As line) As foo;
```

[4]

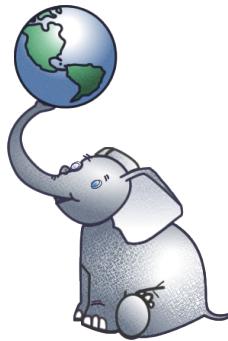

Hilfe bei der Datenbereinigung

- `ST_IsValidDetail`
- ab 1.5 `ST_IsValidReason`
- `ST_MakeValid`
- `ST_RemoveRepeatedPoints`

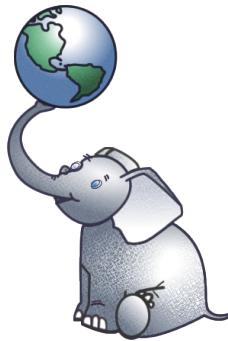

Invalid Polygone

ST_IsValidDetail

```
SELECT
  ST_IsValidReason(the_geom) as reason,
  ST_IsValidDetail(the_geom) as detail,
  ST_Area(the_geom) as area
FROM invalid_polygons
WHERE
  ST_IsValid(the_geom) = false;
```

ST_IsValidDetail

reason	detail	area
Self-intersection[1 1] 0000F03F)	(f,Self-intersection,010100000000000000000000F03F00000000	0.75
Self-intersection[3 1] 0000F03F)	(f,Self-intersection,010100000000000000000000840000000000	1
Self-intersection[4.25 1] 0000F03F)	(f,Self-intersection,0101000000000000000000001140000000000	0.9375
Self-intersection[6.25 1] 0000F03F)	(f,Self-intersection,0101000000000000000000001940000000000	0.875
Too few points in geometry component[8 0]	(f,"Too few points in geometry component",010100000000000020400000000000000000)	0
Valid Geometry (6 Zeilen)	(t,,)	1

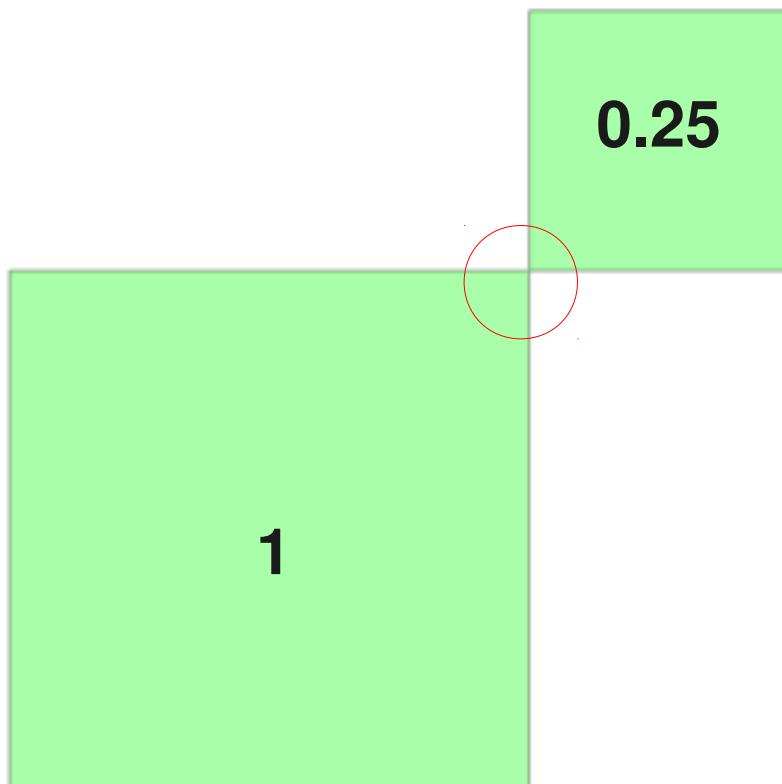

Self-intersection

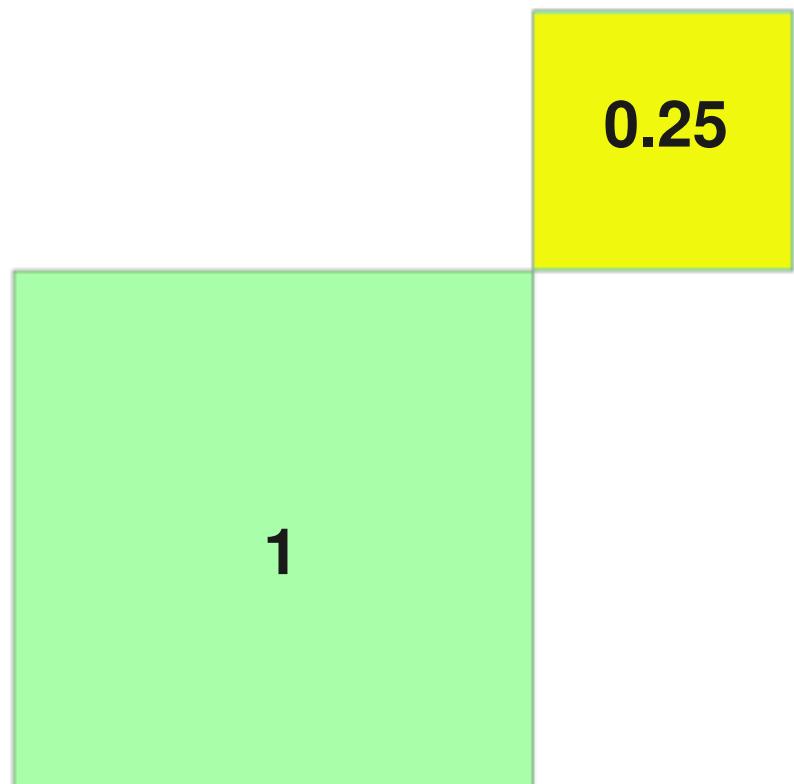

POLYGON

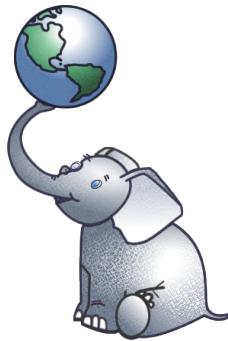

Fläche 0.75 **falsch!**

MULTIPOLYGON

Fläche 1.25

ST_MakeValid

Update invalid_polygons

```
set the_geom =  
ST_MakeValid(the_geom)
```

WHERE

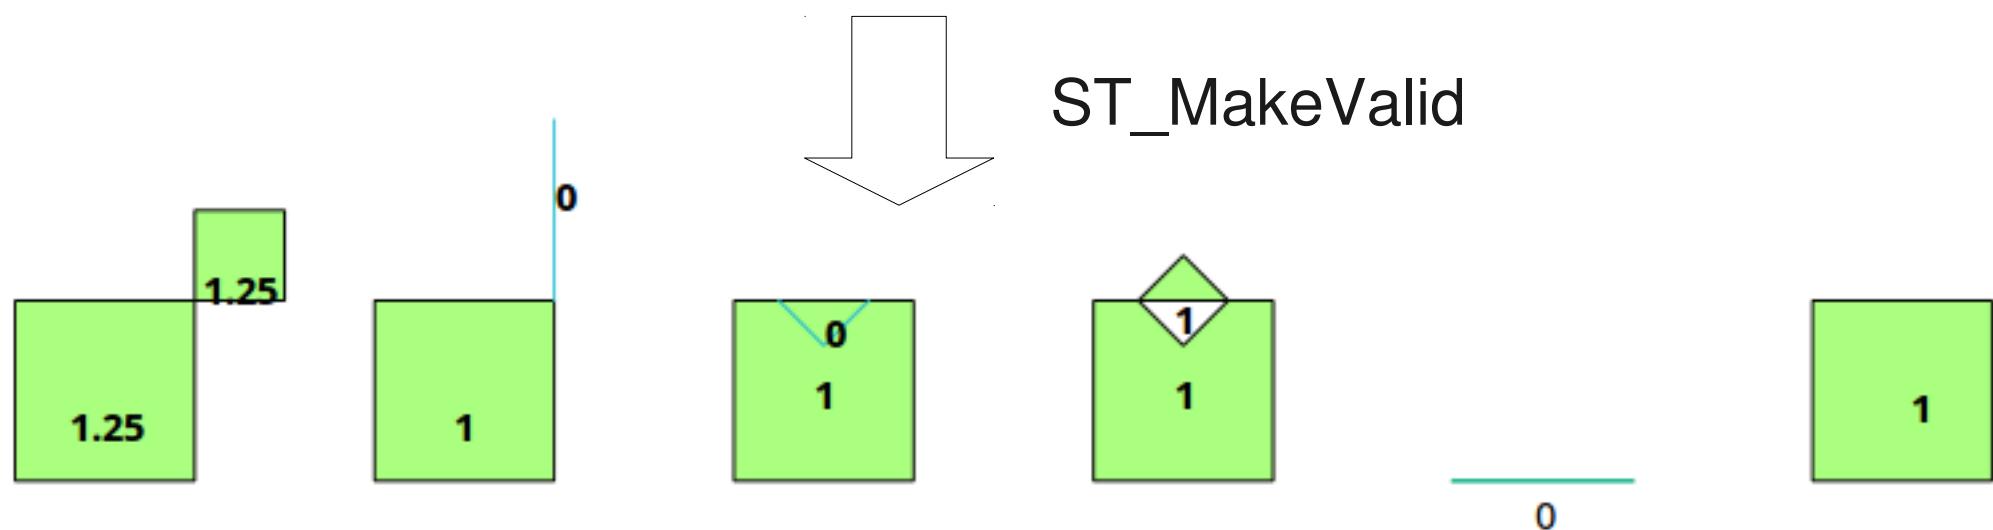

```
ST_IsValid(the_geom)=false;
```

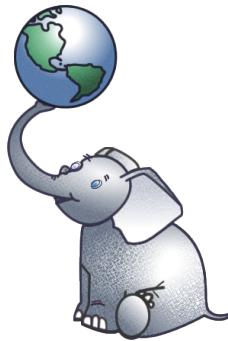

Valide Polygone

`ST_MakeValid`

ST_RemoveRepeatedPoints

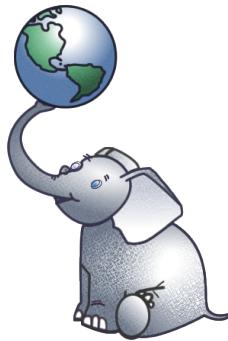

```
SELECT ST_AsText(the_geom) old,  
ST_AsText(ST_RemoveRepeatedPoints(the_geom))  
as new  
from invalid_polygons where gid=6;
```

old

```
POLYGON((10 0,10 1,11 1,11 1,11 1,11 0,10 0))
```

new

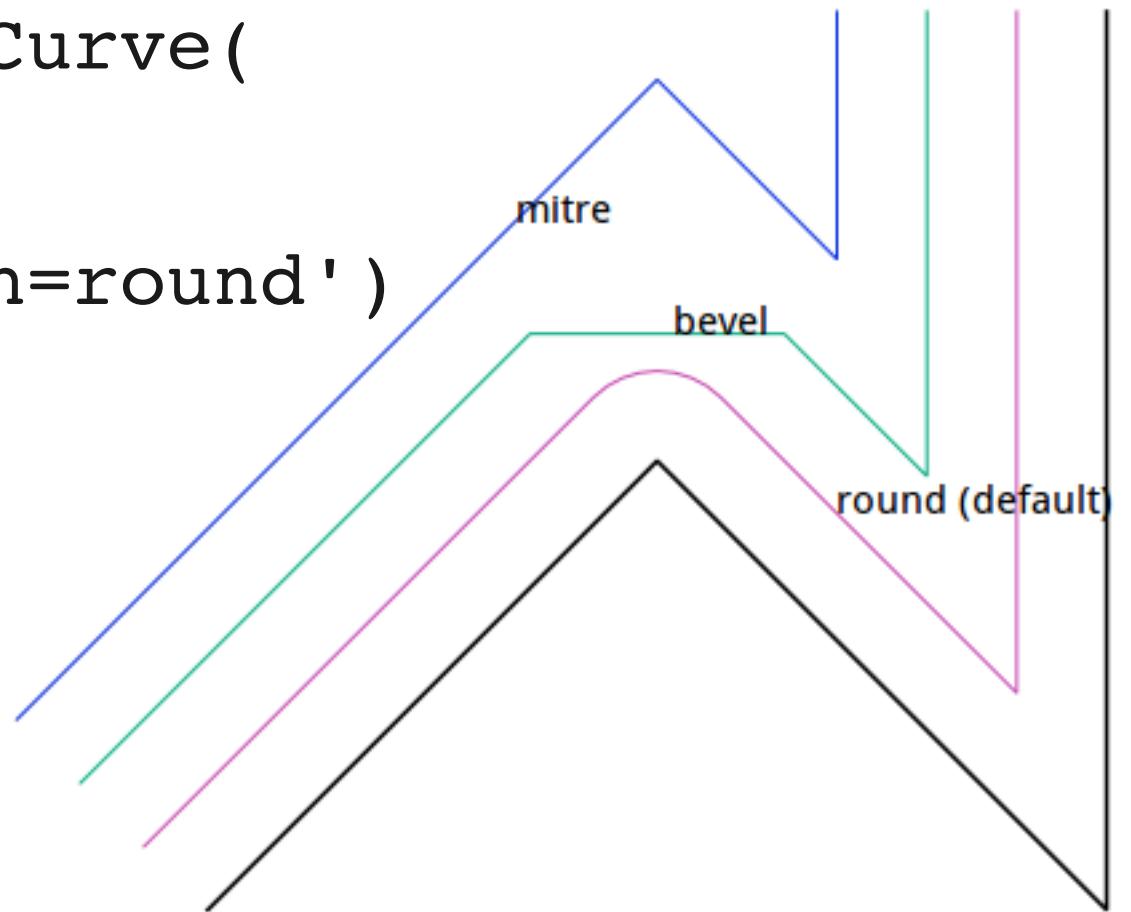

```
POLYGON((10 0,10 1,11 1,11 0,10 0))
```

ST_OffsetCurve

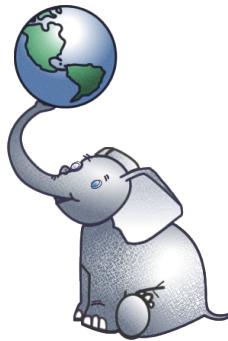

- Erzeugt eine parallele Linie

```
SELECT ST_OffsetCurve(  
    the_geom, 2,  
    'quad_segs=4 join=round' )  
FROM lines;
```

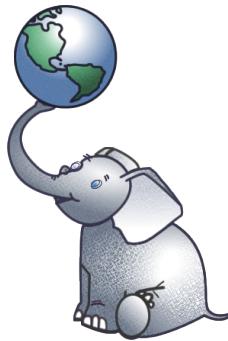

Rasterunterstützung

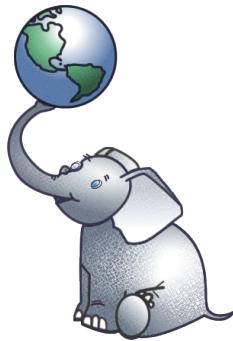

- Raster Import / Export über GDAL
- > 70 Funktionen z.B. Verschneidung, Ausgabe von Pixelwerten, Statistiken, Generierung, Prozessierung
- Vektor <- -> Raster
- Raster Analyse
- Unterstützung durch GDAL 1.8+, MapServer, QGIS Plugin, gvSIG

raster2pgsql

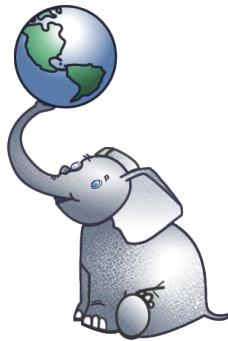

```
raster2pgsql -s 4326 -I -C  
-M -F  
-l 4  
-t 100x100  
/user/germany/germany.tif  
germanyt | psql -U user -p  
5433 -d fossgis
```

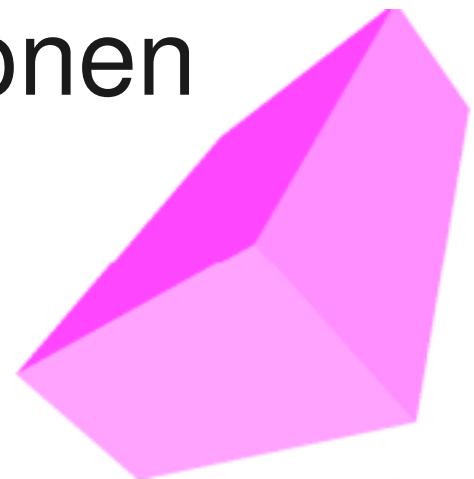

Raster

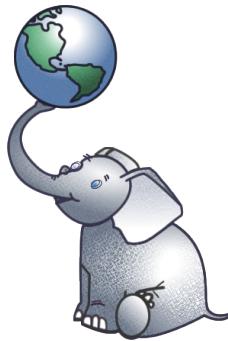

- `ST_AsPNG`,
`ST_AsJPEG`, `ST_AsGDALRaster`, ...
- `ST_AsRaster`
- `ST_Intersects(raster, geometry)`
- `ST_PixelHeight(raster)`
- `ST_NumBands(raster)`
- `ST_Resample`
- `ST_Polygon`
- `gdal_translate`

3D

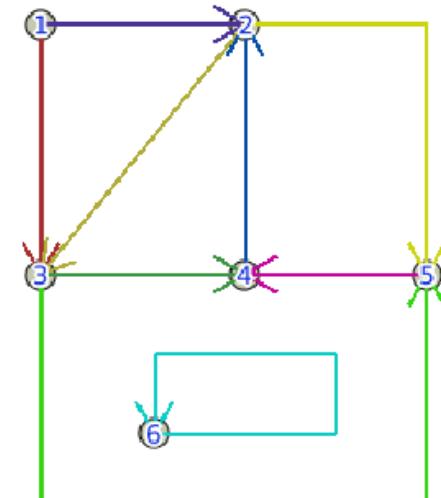

- Neue Geometrietypen
 - TRIANGLE, TIN,
POLYHEDRALSURFACE
- Neue und erweiterte Funktionen
- 3D/4D Index

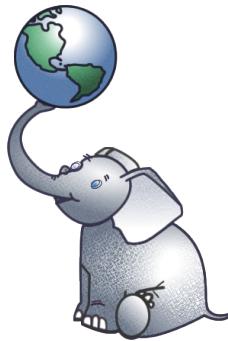

Topology

- Volle SQL/MM Topology Unterstützung
- Neuer Datentyp TopoGeometry
- Schema topology mit > 50 Funktionen
- Umwandlung in geometry über TypeCast (topo::geometry)
- Siehe PostGIS Wiki Topology

GiST KNN Suche (9.1)

- K-Nearest Neighbour Index

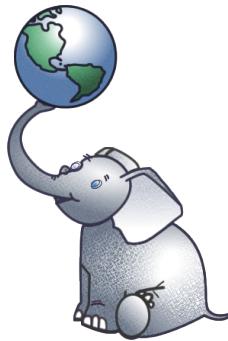

Beispiel: Ausgabe der 10 nächsten Objekte zu einem Punkt

```
SELECT name, gid
FROM geonames
ORDER BY geom <-> st_setsrid(st_makepoint(
-90,40),4326)
LIMIT 10;
```

<-> Distance Centroid BBOX

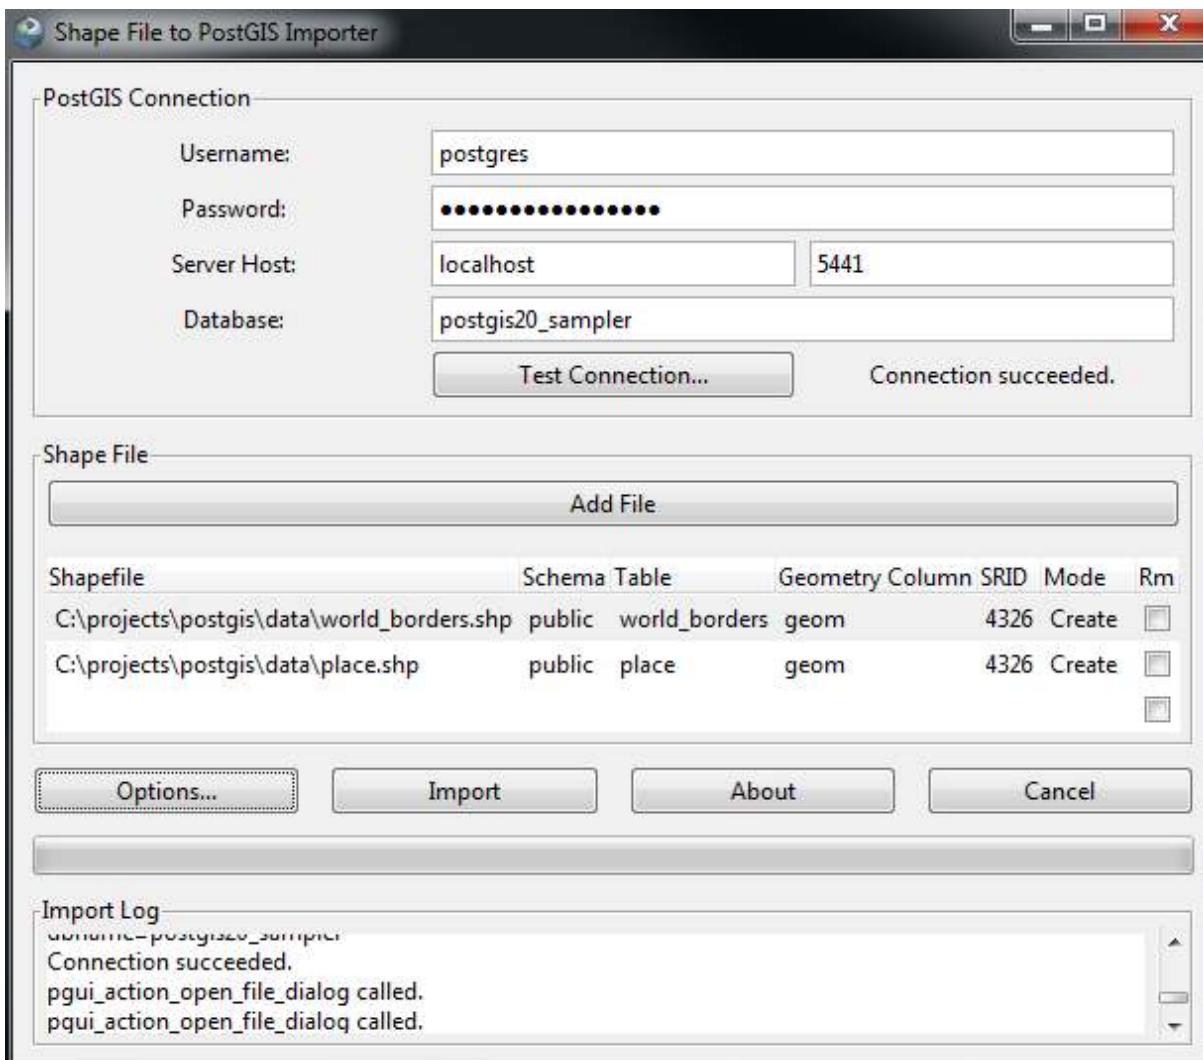

<#> Distance BBOX

mehr unter: GiST KNN Suche

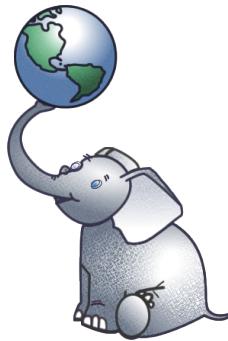

shp2pgsql-GUI

- Plugin in pgAdmin3
- Import mehrerer Shapes

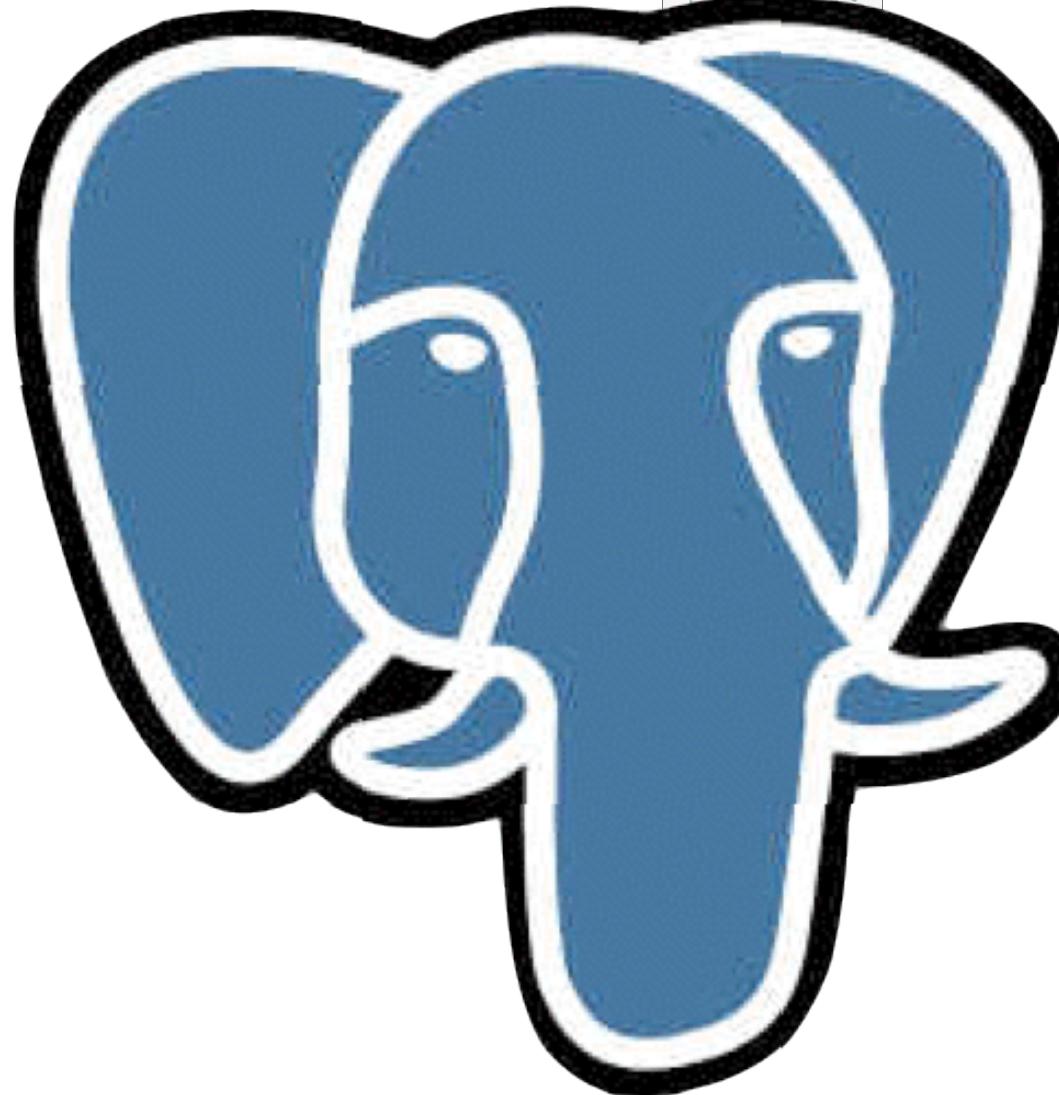

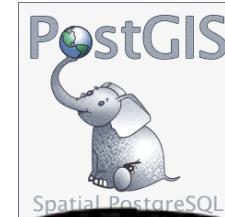

[3]

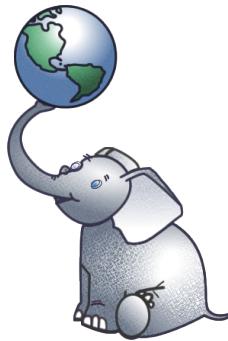

PostGIS 2.0

- und vieles mehr
- Release Notes 2.0.0
- PostGIS Dokumentation: PostGIS Functions new, behavior changed, or enhanced in 2.0
- Milestone 2.0 (closed Tickets)

Vielen Dank!
